 **SCAN COIN**

SCAN COIN 1101/1102 Twin Lamp counterfeit detector is a combination of an illuminated table with normal light and an ultraviolet lamp.

SC 1101/1102 Twin Lamp is a universal instrument that allows you to take advantage of the possibilities that already exist for checking most banknotes, cheques, ID-cards, pass ports etc. in an effective way. The device is designed for rapid checking.

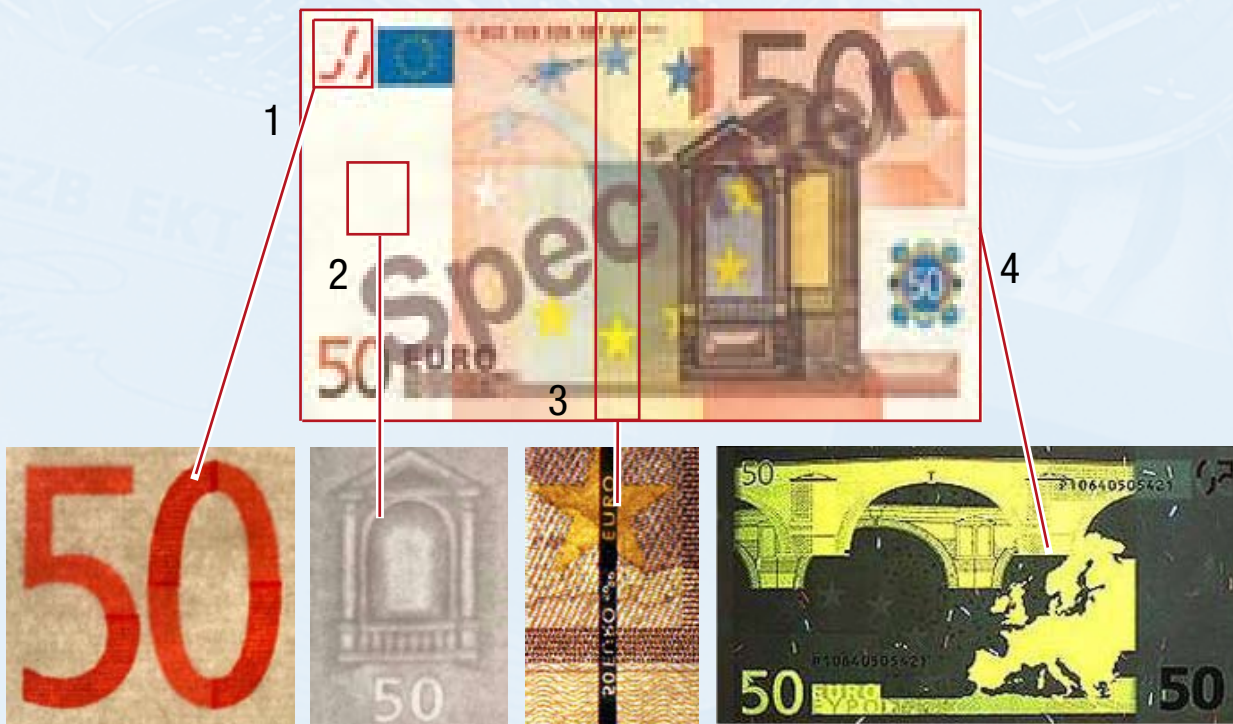

Today's colour photocopying machines are so good that even amateurs are capable of producing counterfeit banknotes and cheques. Everything points to an increase in this sort of problem. SC 1101/1102 is the weapon to meet this threat. There are security features that can be detected when checking banknotes, cheques, ID-cards, pass ports etc:

- See through registers (1)
- Water marks (2)
- Security threads in banknotes (3)
- Fluorescent colour printing, e.g. UV images and coloured fibres in paper (4)

Water marks, security threads and see through registers are best checked by using transparency techniques on an illuminated table. Fluorescent colours are only visible when illuminated with a special type of ultraviolet light.

Banknotes do not fluoresce as bleached paper does. Without the possibility of control, you cannot be completely sure if the document in front of you is a counterfeit. SC 1101/1102 will give you the answer.
